

CLEO VLProxy | Advanced Network Security

Installed on an external facing machine, CLEO VLProxy interrogates inbound connections and passes authorized users to your CLEO VLTrader™ or CLEO LexiCom™ installation inside the firewall, increasing network security and limiting the configuration at the firewall level.

Advanced Security Options

- ▶ Forward and reverse proxy ensures all data is routed securely.
- ▶ Data is streamed through CLEO VLProxy; no data is decrypted or saved locally.
- ▶ Multiple CLEO VLProxy installs offer 100% uptime.
- ▶ Multiple Synchronized CLEO VLTrader installs supported for load balancing or high availability.
- ▶ Reverse forward connections; no open inbound ports required.
- ▶ Encrypted configuration data ensures CLEO VLProxy settings are protected in the DMZ.
- ▶ Email on failure alerts keep you notified of CLEO VLProxy's status.
