

How to Update LexiCom\VLTrader\VLProxy

VLPROXY

VLProxy is currently a web based update. To obtain the latest release, follow this link:

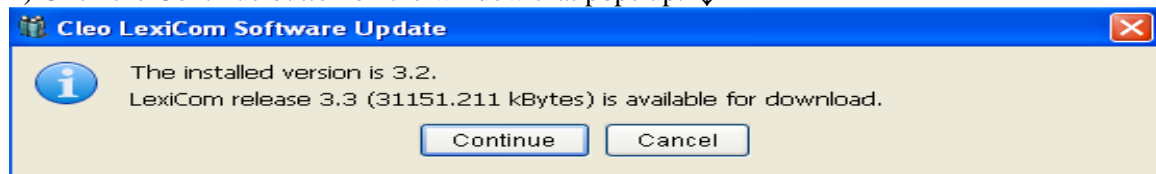

<http://www.cleo.com/download/VLProxyReq.asp>

Once the download is complete, the service should be stopped and then installer can be run. When selecting an install location, be sure to select the location of the current VLProxy install. This will insure all of your settings are re-used. Once the installer is complete, you can restart the service. VLProxy will now be at the latest version and will have retained all settings.

LexiCom\VLTrader

***Note:** The term *VersaLex* used in this document is synonymous with LexiCom and VLTrader. VersaLex is the technology upon which LexiCom, VLTrader, and VLProxy are built.

- 1) Open the VersaLex application
- 2) Click on Tools - Software Update.
- 3) Click the Check for Update button.
- 4) Click the Continue button on the window that pops up. ↓

- 5) At the “Select temporary location for install file(s)” prompt click Save. By default (on Windows systems) this will download the install.exe file to C:\DOCUME~1\USERNAME\LOCALS~1\Temp\VersaLex, will then automatically extract the files and begin the install procedure.
- 6) You’ll see a progress window in the Cleo LexiCom Software Update window ↓.

- 7) Install VersaLex by answering the prompts (Next, Next, Accept, Next...).
- 8) At the Choose Install Folder prompt ***MAKE SURE*** the installation path is that of the current location of VersaLex, and then click Next.
- 9) Continue the install by answering the prompts (...Next, Next...).
- 10) At the Install As A Service prompt ***MAKE SURE*** the “Start service automatically...” checkbox is checked if you are running as a service and then click Next.
- 11) Review the Pre-Installation Summary window.
- 12) Click the Install button.
- 13) Click Done when installation is completed.
- 14) Repeat steps 1 through 6 to download the latest patch level.
- 15) Restart the LexiCom service.
- 16) VersaLex is now at the latest version.
